## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Applicant's amendments filed on 11/18/04 have been fully considered and are persuasive.

2. The following is an examiner's statement of reasons for allowance:

As per claims 1-8, 10, Applicant's claimed invention is deemed allowable over the prior art of record as the prior art fails to teach or suggest wherein each group of bus lines includes two unidirectional bit lines for each data bit, and wherein the bus bridges include a multiplexer for each outgoing bit line that selects from three other incoming bit lines in combination with other limitations as recited in independent claims and further in view of the specification and applicant's arguments.

As per claims 11-14, Applicant's claimed invention is deemed allowable over the prior art of record as the prior art fails to teach or suggest memory manager setting a router in a conflict-free access pattern in response to said transfer requests, the memory manager providing control signals to bus bridges that couple local busses between a memory module and a processing device to a cross-bus between the local busses and the local busses each include two unidirectional bit lines for each data bit and the cross-bus includes two unidirectional bit lines for each data bit in combination with other limitations as recited in independent claims and further in view of the specification and applicant's arguments.

As per claim 15, Applicant's claimed invention is deemed allowable over the prior art of record as the prior art fails to teach or suggest a memory controller means for

setting said bridge means to provide processing devices with access to memory modules, wherein the memory controller means is configured to provide highest priority for access from processing devices to the associated memory modules and the local bus line groups each include oppositely configured unidirectional bit lines for each data bit and the cross-bus lines includes oppositely configured unidirectional bit lines in combination with other limitations as recited in independent claims and further in view of the specification and applicant's arguments.

As per claims 16-24, Applicant's claimed invention is deemed allowable over the prior art of record as the prior art fails to teach or suggest local intersect busses are coupled to each of the plurality of local memory busses by four multiplexers at each intersection in combination with other limitations as recited in independent claims and further in view of the specification and applicant's arguments.

As per claims 25-26, Applicant's claimed invention is deemed allowable over the prior art of record as the prior art fails to teach or suggest the cross-bus lines are configurable to latch signals to the separate sets of bus lines such that throughput and cross-path latency between processors and memories that are not paired is customizable in combination with other limitations as recited in independent claims and further in view of the specification and applicant's arguments.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
